

UEF ACOUSTIC DOTS PLACEMENT GUIDE

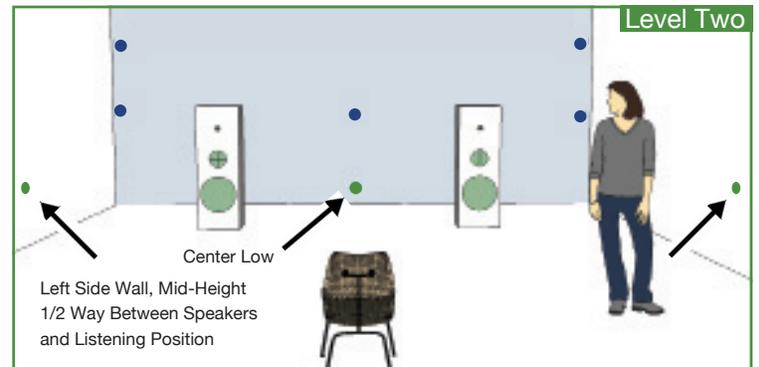

PLACEMENT: For temporary placement and testing, clean wall thoroughly with alcohol or a household degreaser. Attach a small amount of the included “white tac” to the back (label side) of the UEF Acoustic Dot. Follow the included guide for mounting placement. Once the final position has been decided, you can use the “white tac” as the final mounting material or for a more permanent placement, remove the film from the back of the UEF Acoustic Dot and place on wall.

CAUTION: Placement with adhesive back overtime may become permanent and cause damage to mounting surface when removed.

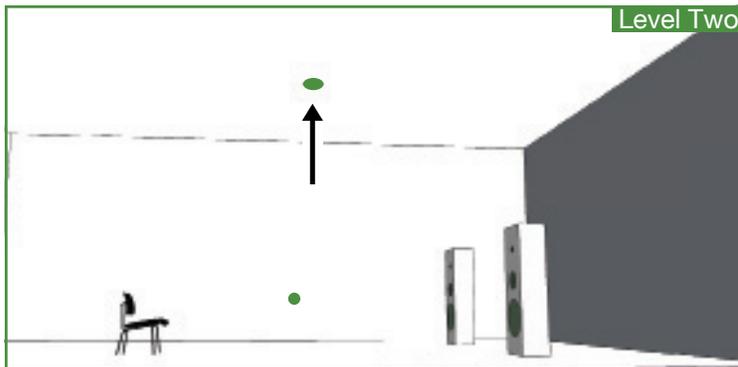

CLEANING: Do not use liquid cleaners or damage may occur. We recommend using pressurized air, soft bristled paint brush or a feather duster

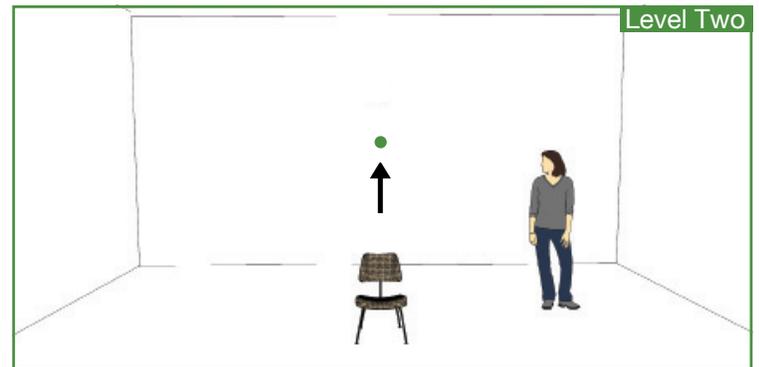

- Place (1) Dot at center of front wall.
- Place (2) Dots at left side of front wall, (1) at 4-5 ft. above floor and (1) at 5-6 ft.
